Come Along for the **TUM Alumni Trip** to France!

Toulouse, Carcassonne, Montpellier, and Paris are just some of the highlights of the TUM alumni trip from 3/26 until 4/5/2017. Are you interested? If so, then come to our introductory event at TUM in November, where you’ll be introduced to the program in detail, and personally get to know some of the travel participants.

If you’re interested, just send a mail to: alumniundcareer@tum.de or register in the community group “Alumni Trips” at: [www.community.tum.de](http://www.community.tum.de)

“**The idea of our alumni trip lives in a unique way thanks to TUM alumni in France, who show us their country and culture.**

Falk Lamkewitz
Electrical engineering and information technology 1977
Entrepreneur and initiator of the TUM alumni trip 2017
Dear Alumni,

Shaping together, thinking together, staying in dialogue – that’s what makes the TUM network stand out. The variety of the program you’re holding in your hands right now is a great confirmation of this. Our thanks go to everyone who makes this comprehensive offer possible with their commitment, and our thanks go out to you – our alumni – who are involved with interest.

A little bit of home all over the world: Come along on the TUM alumni trip to France or get together with our Iranian alumni in Tehran. Become captivated by music during the Heidelberg Spring festival or accept our alumni’s invitation to the chemical park in Burgkirchen an der Alz. Discover new things at TUM like the cancer research center TranslaTUM or go out with old friends to the annual Vivat TUM Advent concert.

We look forward to seeing you and wish you wonderful get-togethers within the TUM family circle.

Your Iris Stolz

on behalf of the whole Alumni & Career Team

Note:
You want to open your doors from alumni for alumni? We look forward to your ideas! alumniundcareer@tum.de
In *Back to Campus*, you can experience your Alma Mater in all of its facets.

Every semester, *alumni* offer an extraordinary program for *alumni*.

Invest in the future: the programs offered by *alumni* for students.

Experience the TUM feeling throughout the year at *Dates and Offers*. 
Table of Contents

02 TUM Alumni Trip
Join other alumni on trips and visit some of the most stunning regions in France this coming spring.

03 Editorial
A big thank you to everyone who enriches the KontakTUM program with guided tours, lectures, city walking tours and much more.

04 Contents
This semester as well, the TUM network offers something for everyone when it comes to being there, taking part, experiencing and enjoying.

06 Back to Campus
Join the discovery trip to the Garching campus, in the university hospital Klinikum rechts der Isar or follow the trails of the Blue Rider.

24 Alumni for Alumni
Whether in Hamburg, Frankfurt or Heidelberg, in Munich, Bavaria or at the other end of the world: alumni invite alumni.

46 Alumni for Students
Your commitment is welcome! Support students when they’re starting their career, or have questions about planning their life and career.

52 Dates and Offers
The TUM is open to you: during the semester calendar, you can choose from hundreds of events, dates and other offers.

Note:
The KontakTUM program is now available online, too, as epub in German and English! www.together.tum.de/epub
The Technical University of Munich (TUM) is one of Europe’s best universities with its more than 500 professors, around 10,000 employees and 39,000 students. Its focal fields of focus are engineering, natural and life sciences, medicine and economic sciences. TUM is one of the first three Excellence Universities in Germany.
Interdisciplinary exchange is systematically promoted at TUM, and dialogue with the public is sought. In Back to Campus, you’re invited to come to TUM and experience your Alma Mater in all of its facets as a member of the big TUM family. Find out more about what is being done for our future at TUM in science and technology.
There are exciting offers for children and prospective students, too. And some items on the program agenda and guided tours are in English as well for international guests.

A Journey of Discovery in the World of Science

Open House at the Garching Campus

The Garching research campus is one of the biggest centers for science, research and teaching in Germany. Scientific and technical research institutions as well as companies close to the scientific community are located here in a unique concentration. The fields of work range from basic research through to the development of high-tech applications with a promising future. During the Open House, you can get to know more than 30 institutes, facilities and companies. New additions here include the TUM Entrepreneurship Research Institute and TUM’s Catalysis Research Center. After the remodeling, you can now tour the Maier-Leibnitz Laboratory’s particle accelerator again, too. As an extra treat, celebrations will kick off starting at 6 p.m. to celebrate the 10th anniversary of the underground railway connection!

 antiquated

Open House
Saturday 10/22/2016, 11 a.m. – 6 p.m.

Silver Degree and PhD Anniversary

You earned your graduate degree or PhD at the Technical University of Munich 25 years ago? Reunions, new acquaintances and great experiences on a festive weekend within the TUM family circle – that’s what our alumni celebrating their silver anniversary can look forward to this year. During the day at our Open House, you can experience the sophisticated, lively Garching campus which has grown tremendously since you studied here. On the evening’s agenda, the President of TUM invites you to “your” silver anniversary celebration in the Bayerischer Hof. On behalf of the university executive committee, guests will be welcomed and the persons celebrating their anniversary will be introduced. You’ll be honored as a silver jubilarian when the president ceremonially presents the certificates. Wrap the evening up together in a relaxed way with friends while having a great dinner and glass of wine.

CALL:
You’re a silver jubilee, but haven’t received an invitation?
Then please contact us: alumniundcareer@tum.de

Concert Tour in China

Chinese graduate students and doctoral candidates make up the largest group of international students at TUM. The TUM has 17 partner universities in China and its own office in Beijing since 2006. At the invitation of several Chinese universities, the TUM chamber orchestra is traveling to China for four concerts. All alumni and students who are on site are very welcome to attend.

Registration: alumniundcareer@tum.de

Concerts

1. Sunday 10/30/2016
   Shanghai Jiaotong University
2. Wednesday 11/02/2016
   Wuhan University
3. Friday 11/04/2016
   Sichuan University
4. Saturday 11/05/2016
   Southwest Jiaotong University

TUM Chamber Orchestra

Founded in June 2016 on the occasion of the opening of TUM’s Academy Center in Raitenhaslach with students, alumni and staff of TUM

Conductorship: Felix Mayer
Munich shines – and grows. This does not just refer to the number of jobs, but also to its inhabitants. The consequence: it seems that affordable housing is now hardly available, the transport infrastructure is overloaded. In a study, a team spearheaded by Prof. Alain Thierstein and Prof. Gebhard Wulfhorst developed diverse approaches on how transport planning and site development can be changed to make them future-proof. “We must put core focus on people!”, states Prof. Thierstein, who will present the findings exclusively for the alumni. “Many prefer qualitatively high-value living in high density districts with a wide variety of offers around public network traffic hubs.”

The metropolitan region between Augsburg, Rosenheim and Kaufbeuren is substantially aligned to the center of Munich, too. A solution could be to interlink the region’s hubs with each other in a better way – this would also strengthen the centers beyond the state capital.

**Lecture**

Tuesday 11/08/2016, 8 p.m.

**MUNICH CAMPUS**

Registration: [www.together.tum.de/events](http://www.together.tum.de/events)

---

**Professor Dr. Alain Thierstein**

Since 2005, Professor for spatial development at TUM and also partner with Ernst Basler + Partner AG in Zurich
Munich is growing faster than expected. According to the most recent figures, over 1.7 million inhabitants are anticipated for 2030. In a comprehensive study at TUM, 7,300 people of the Munich metropolitan region were surveyed regarding their living and working environment.
Professor Dr. Richard Bamler

Since 2003, full professor for remote sensing methodology at TUM and since 2000, Director of the Institute for Methodology of Remote Sensing at the German Center for Aerospace e.V. (DLR)

Degree in communications engineering 1980
PhD 1986
Habilitation 1988

Impressive shot from afar:
TerraSAR-X photo from EOC site Oberpfaffenhofen
If satellites had been around a hundred years ago, the “Titanic” might not have collided with an iceberg at that time. That’s because today, needle-sharp images of the earth’s surface can be taken, which also enable icebergs floating in the sea to be tracked precisely, with “Radar Eyes”, the computer-aided SAR (Synthetic Aperture Radar) technology. Professor Richard Bamler invites TUM alumni to observe this fascinating technology up close right on-site at the Earth Observation Center (EOC) in Oberpfaffenhofen. The two radar satellites Terra SAR-X and TanDEM-X can – in connection with well-thought-out data processing at ground level – deliver an altitude reading from any and all points of earth within just a few minutes and create a 3D view. And this during any kind of weather, day and night – which is a key advantage of radar technology as opposed to satellites. The fascinating aspect here: the satellites do not only identify single buildings, but also measure the smallest subsidence of ground and tectonic shifts.

How Radar Satellites See the World

Facets of Internationalization: Students in Talks with TUM Ambassadors

Every year on the 1st advent, renowned international scientists who were guests at the TUM and act as multiplicators for our university in all corners of the globe are awarded with the honorary title of TUM Ambassador. During a podium discussion before the award ceremony, some selected TUM Ambassadors answer questions posed by the young academics. Young and talented students of TUM: Junge Akademie and doctoral candidates of TUM Graduate School discuss current issues with established researcher alumni which everyone is focusing on: about new developments in research and challenges of the future, about digital teaching and new paths into science, the importance of international relations and the individual’s responsibility towards society. Join in the discussion!

Vivat TUM!
Advent Concert

Afterwards, the Golden Anniversary celebration

The Vivat TUM concert on the first Advent Sunday has become a tradition. All alumni, all associations of friend members, and all first semester students with their parents are very welcome to attend!

Pre-concert lecture
“Creation of the Universe through Music”

A very special work is on this year’s program: the Cecilian Ode, KV 592, a work composed by Georg Friedrich Händel in an adaptation of Wolfgang Amadé Mozart. The original text is composed by John Dryden. The ode starts with the words: “From harmony, from heav’ly harmony this universal frame began.” The introduction of a cosmic harmony is ancient, and it goes back to a man who you may definitely call the first mathematician and the first musician, too: Pythagoras. His concept of the harmony of spheres would decisively define science for several centuries. The Viennese mathematics professor Rudolf Taschner will give an introduction to the work and the Pythagorean world view together with the conductor of the concert, Felix Mayer.
Really Hits the Bull’s Eye!
The Perfect Soccer Shoe

It gives players stability, optimizes power transmission even when space conditions are difficult, and it ensures the ideal spin during ball contact: the soccer shoe. But which requirements and stresses does it have to withstand beyond this? When does a stiff sole help, when does it hurt? And which cleats fit with which soil? Prof. Veit Senner and his team from the Professorship for Sports Equipment and Materials of TUM are looking for an answer to all of these questions. When touring the test stand at the Garching campus, Prof. Senner will report on his research work to TUM alumni, and as a special highlight while doing so, he’ll demonstrate the test device he and his team created, the TrakTester.

Choosing the optimal shoe is just as important for a soccer player as choosing tires is for a race car driver. The TrakTester is a biomechanical testing device, including an artificial foot.
Leaving Your Legacy the Right Way

In Germany, the line of succession for your inheritance is very clearly regulated by legislators, provided that you have not made your own provisions during your lifetime. When is a testament meaningful for you? How can you be sure your legacy will also actually be used in the way you want it to be? Attorney-at-law Ludger Bornewasser introduces inheritance law in key areas in an easy-to-understand manner during his approximately 1 ½ hour lecture, and he’ll answer your questions. The TUM University Foundation’s team will be available as a contact partner for you, too, if you’re interested in supporting an institution like TUM. Based on examples from daily law practice, you’ll learn how you can implement your wishes with a cleverly structured testament.

Maybe you’ve built up a collection with a lot of love and care or you afforded a particularly wonderful musical instrument. With your testament, you can regulate how your treasures will be passed on as you see fit.
Following the Trails of the Blue Rider

Murnau is a small, idyllic village community at the Staffelsee. It gained fame due to artists’ paintings of the “Blue Rider,” artists who frequently stayed here in the Alpine foothills before the First World War and drew, painted and carved in wood. The life and works of the circle of artists around Wassily Kandinsky and Gabriele Münter are the core focus of this excursion. During an artistic, historical city tour through Murnau with Fritz Walter Schmidt, you’ll take a trip through time that began a hundred years ago, and you’ll find out how the new and revolutionary artistic style of expressionism was able to unfold and develop in this rural area. Medially supported, you’ll compare the original motifs at various sites with their implementation in the artists’ works. TUM’s international guests are also invited to take part in this tour, which is held in English.

The so-called “Russian House” in Murnau, which Gabriele Münter acquired in 1909, is where artist friends of the Blue Rider always got together. Gabriele Münter lived here intermittently until she passed away in 1962.
Robotics Course for Children

During this course in the TUMlab, TUM’s experimentation lab in the Deutsches Museum, children can learn how to program a robot themselves. Together with a course partner, they tinker with and experiment on the very latest Lego robot, the Mindstorm EV3, and equip it with sensors so that it responds to touch, noises or differences in brightness. The TUMlab team gives tips – but during the programming tasks, the children often come up with solutions on their own that even leave the experts amazed. The children can take part in the courses alone or with friends. After the course is over, an hour is left to explore the Deutsches Museum with the parents.
Around 480,000 persons get cancer in Germany every year. Cancer diseases are the second most common cause of death. That’s why improving diagnosis and therapeutic options is a key task of cancer research. At the Campus Klinikum (hospital) rechts der Isar, a one-of-a-kind interdisciplinary research center is taking shape for this purpose: the Central Institute for Translational Cancer Research of the Technical University of Munich (TranslaTUM). That’s where scientists from the fields of medicine, engineering and natural science will work together to improve cancer patients’ chances of recovery. One of the center’s core goals is to quickly transfer findings from research into clinical actual practice, a process that’s defined as translation, and from which the center takes its name. Faster translation is also enabled thanks to direct proximity to the Klinikum (hospital) rechts der Isar. As TUM alumni, you can exclusively get to know TranslaTUM before its operational start-up during a lecture and tour.
The simulation shows the main entrance of TranslaTUM’s new building. The scheduled 16 working groups will have approx. 5,600 square meters of research space and highly sophisticated technical equipment. Research should especially be on tumor diseases of bone marrow and of the digestive tract.
TUM interprets internationality as the interlinking of our homeland with the world. To date, over 50,000 alumni from 139 countries have registered in the TUM network. Differences in individual abilities and the diversity of people in the TUM family are exceptionally valuable, and deliver a decisive contribution to the success and vitality of our university.
The TUM network lives from the initiative of committed alumni and the many extraordinary activities that alumni offer for alumni every semester. Get involved: register, come along, let yourself be surprised. And maybe you’ll then want to be a host yourself next semester and open the doors of your world for alumni, too.
Leadership Adventure

A group of experts holding leadership positions has established itself among the TUM alumni. This group gets together on a regular basis and maintains exchanges between colleagues. Novices who have just recently taken on a leadership position benefit from discussions with like-minded people here, too. Come on board. The group is open to new members, offering space to share information with colleagues about own competencies, to talk about problems, pass on experiences and develop implementable potential solutions. Be it leadership of staff or new challenges in everyday working life – share your own topics with the others, learn together and from each other. Benefit from the expertise of managers from various disciplines and companies, who bring in their own working method and approach in each case.

Collegial Consulting

10/27/2016, 6:15 p.m.
MUNICH CAMPUS
Registration and other dates to join the group:
www.together.tum.de/events

A new perspective, a different point of view: Collegial exchange in the group makes you stronger and gives you individual support as a manager.
Munich and National Socialism

Remembrance of National Socialism in Munich has two sides: Adolf Hitler held his first speech in the Hofbräuhaus in 1918, and tried to gain control of the government with a coup in 1923. In 1935, the Isar metropolis acquired the title of “capital of the movement” and in 1937, it was elected as the “city of German art.” On the other hand, Munich was also a city of the opposition: in Schwabing, students of the resistance movement “White Rose” distributed their leaflets – and had to pay for that with their life. During this tour, the city’s dark history will be retold up to the capitulation in 1945.

“My time at TUM was fantastic! Getting together with TUM ambassadors from around the world was so interesting and impressive – and in the evening I was on the rooftop terrace of the Vorhoelzer Forum and watched the sunset behind the roofs of TUM, that engraved itself into my heart forever!”

Vanessa Ferrari, Ph. D.
Comes from Verona and earned her doctorate in history with a major in National Socialism at the LMU Munich.

Alumni Get-Together in Shanghai with Attendance of Concert

The TUM Chamber Orchestra is coming to Shanghai in November: a great occasion for an alumni get-together on site! Zhuolin Gan invites all Chinese and German alumni who are on site to this event and looks forward to a lively exchange during a meal together at a restaurant afterwards. Although she herself – like all Chinese of her generation – is very Internet-oriented, – “the Web is simply the most convenient communication tool for us” – face-to-face encounters are the heart of every network for her: “That’s why the challenge is always to find opportunities to get to know one another personally, precisely in a country as big as China.” And what could be better suited for this than attending a concert together?

Zhuolin Gan

Studied international relations at the Jiaotong-University, worked for Louis Vuitton in Shanghai since 2011, and is active today as consultant and trainer for service staff of European luxury brands

Exchange semester 2009

Where Modern Radio is Produced

Ulli Wenger has been making radio for more than 30 years – and doing so with heart and soul. He still knows Thomas Gottschalk, Günther Jauch, Sandra Maischberger and Claus Kleber from their time together in the radio business. With his own program “One-Hit-Wonder” and its 700 episodes, he has long since become a legend throughout Bavaria himself, too. He is now inviting TUM alumni to take an exclusive look behind the scenes of the Bayern 3-broadcasting studio at the Rundfunkplatz – and also promises a special treat: his visitors are allowed to be right on-site close up when Thorsten Otto moderates his daily talk show “Mensch, Otto!”.

Guided Tour
Thursday 11/10/2016, 6 p.m.
MUNICH
Registration: www.together.tum.de/events

“I have fondest memories of my time studying. That’s also why I belonged to the mentors right from the very first minute of the mentoring program. I recommended my first mentee for promotion, and was then also in lecture hall 14 in Weihenstephan when the father of triplets received his doctoral cap. To date, I had five mentees under my wings.”
Konnichiwa!
Alumni Get-Together in Japan

TUM alumni have already been meeting on a regular basis in Tokyo since 2008. Some alumni like Yukou Mochida, Masao Kajiwara and Ko Matsuda have been on board for some time now, but new alumni are added every May. Exchange students of TUM who are on site are invited as well, and they’re always warmly included in the alumni circle. This year, the get-together is taking place in the rooms of the representative office of the Free State of Bavaria in Japan. Some short contributions by alumni are planned on the topic “Working and Living in Japan” with a subsequent discussion: as an initial aid for young alumni who are just starting to gain a foothold in the professional life in Japan and who can benefit from the wealth of experience of established alumni. The get-together afterwards invites to an informal exchange, and some of our Japanese TUM alumni will come dressed in dirndls and leather pants which they’ve brought along from Munich.

Alumni Meeting with Get-Together
Friday 11/11/2016, 7 p.m.
TOKYO
Registration: alumniundcareer@tum.de
"My time at TUM was marked by encounters. My fellow students and professors were a huge asset for me. I especially remember a fireside chat with the President, Wolfgang A. Herrmann. He candidly told us about his everyday working life. It was also exciting to hear how competition for professor talents works today."

#SocialLive16
Communicating in the virtual world

Life on the net is fast-paced – and short-lived. Many social media which were popular yesterday are now forgotten by everyone today. Alumnus Martin Prankl knows how to communicate under these circumstances so that the message gets across, namely: in a target-oriented, smart and efficient way. As moderator of the #SocialLive16 workshop, he pinpoints trends exclusively for alumni. For this purpose, he also invited experts from the media industry: “Each speaker has only ten minutes’ time and a maximum of five charts,” he explains. “The rest is improvisation. We’ll show you live how social media communication works nowadays. How the customers tick, how we reach the target groups – today and tomorrow.” Oh, by the way: “Language of the event is Bavarian,” adds the Upper Bavarian.

MBA 2014

Martin Prankl

After completing his training as advertising specialist and his studies in economics as consultant for PR and social media, he founded his agency Prankl Consulting in 2015.

Registration: www.together.tum.de/events
On the Trail of Alfred Nobels

TUM alumnus Gustav Andersson is a Swede, and a physicist. Like Gustaf Dalén, Manne Siegbahn, Hannes Alfvén and Kai Siegbahn, the four Noble Prize winners of his home country. But the 26-year-old is still at the very start of his career and is now right in the middle of obtaining his PhD after his studies at TUM. All the same, he’s fascinated by the Noble Prize. That’s why he had a fantastic idea: “when you live in Sweden, you should at least go to lectures of the award winners once in a lifetime. They’re part of our country’s history and culture.” And in addition to that, they’re open to the public; you don’t even need to register. Gustav Andersson would like to invite all interested TUM alumni this morning – and to then all go out to eat afterwards. He attended a lecture held by Noble Prize winners for the first time himself in 2012, where he listened to Serge Laroche and David Wineland. And he knows: “after the lecture, there’s generally still time for content-related questions and expert discussions.” And sometimes, other Noble Prize winners are even sitting in the audience who get involved in the discussion, too.

Physics and Chemistry Lecture and Get-Together

The leader in the sector of building up H₂ infrastructure: Linde Gas now has around 90 hydrogen filling stations in 15 countries.

Guided Tour
Tuesday 1/17/2017
UNTER-SCHLEISSHEIM
Registration: www.together.tum.de/events

Hydrogen as Fuel:
Linde Gas

Linde Gas is the leading provider of industrial gases in Europe, supplying around 150,000 customers with individually customized supply concepts from the 1 liter disposable bottle up to a 75,000 liter tank. Industrial gases play a key role when welding, freezing or driving, and when heating, industrial cleaning, ventilation or testing should be performed. Dr. Philipp Schwarz on the program for TUM alumni: “First, we’ll visit the hydrogen filling station, which was designed together with BMW, and afterwards, we’ll see in an experimental show the spheres of life in which gases are used.” Alumni will be welcomed and informed on-site by Linde Speaker Matthias Hauner.
From Milan to Manhattan: Stories by Umberto Eco and Lily Brett

The one: a brilliant satirist, writer and professor. The other: a New York Jewish woman born in Feldafing, who grew up in Australia. The two world citizens Umberto Eco (1932–2016) and Lily Brett (born in 1946) are the core focus of Angi Schall’s lecture, who has passionately been making book text come alive for several years now in cooperation with the alumni club of the medicine faculty. What unites the authors: their humor similar to that of Woody Allen, who talks about the absurdities of everyday life and ironically philosophizes about art, God, love and money. And knowledge about how close to each other tragedy and comedy sometimes are. Angi Schall lets the Italian Eco have his say with his column for the magazine “L’Espresso” and she reads Lily Brett’s laconic New York stories.

Angi Schall

After her apprenticeship as bookseller and education in acting at TUM, she always remained culturally committed and has been active again for some time now with lectures.

Until retirement, employee with the student representative committee
Alumnus Philipp Reipschläger laconically formulates it like this: “Even an airplane has to go to the doctor for a check-up once in awhile.” In this case, an engineer with a PhD. At Lufthansa Technik AG, with 26,000 employees, around 1,700 aircraft inspections are conducted every year around the globe for more than 30 types of aircraft and over 40 types and variants of jet engines. “During a tour on the plant premises and through the large hangars, you can experience close up how high the quality and safety standards are in the process,” promises Reipschläger. “And with a little luck, you’ll also see a few VIP aircraft too,” adds Silvio Ortanderl.

Staying Cool in Unusual Situations

At work and at home, we experience situations each single day that we’ve never encountered in this way before. A lot of people have a hard time staying calm, cool and collected in moments like these and struggle to not let themselves get upset. For TUM alumni, who have already had this experience, alumni Robert Himmelmann and Dr. Benjamin Scharf, offer a workshop. Together, based on several small exercises (and just a little bit of theory), the training should show you how to deal with your own stress and emotions in the right way, even when faced with challenging and tough situations. In the process, all participants have the opportunity to discover their impact on others and to work out suggestions in the group on how they can improve their own presence.

Workshop
Saturday 1/28/2017, 9 a.m. – 4 p.m.
MUNICH CAMPUS
Registration: alumniundcareer@tum.de

“As a consultant, you’re continually ‘thrown in at the deep end.’ You have to learn quickly, deal with this in a level-headed way. I think training programs are very important for this – and I learn at every workshop that I hold, even a lot from the participants”.

“For me, people are always at the heart of unusual situations: in my job at the interface to the customer and as a basketball referee, I’ve learned that the right strategy in dealing with others and with yourself is decisive.”

Robert Himmelmann
Consultant with Senacor Technologies AG
Bachelor’s degree in mathematics 2010
Master’s degree in mathematics 2011

Dr. Benjamin Scharf
Business Analyst, Software Consultant
Postdoctorate 2013/2014
Money isn’t just a means of exchange and payment. Rather, it’s also surrounded by all kinds of myths. Maybe the most well-known: the legend of King Midas in ancient times, who wished from the Gods that everything he touched would turn into gold – and that’s why he almost died of starvation and thirst. A bath in the Pactolos River led to the gift being passed on to the body of water. A last-minute rescue. Anyone who is interested in anecdotes like this and others around money and gold, in antique coins, historical paper money, but also in past and present currency and monetary policy, is cordially invited to the Deutsche Bundesbank Museum. Dr. Sabine Bauersachs has committed herself to the Frankfurt alumni network for several years now, and she is organizing this visit: “Since the museum was closed for two years due to remodeling, TUM alumni will be among the very first visitors to the completely newly designed permanent exhibition,” said Bauersachs.

Guided Tour
Thursday 2/16/2017, 5 p.m.
FRANKFURT AM MAIN
Registration:
www.together.tum.de/events

In the Palatinate region, it’s called “Bimbes,” you call it “Diridari,” in Bavaria, and in Berlin you say “Penunzen”: discover the world of money!
About care for employees with burnout

Meanwhile, not a day goes by without an article being published about burnout: mental fatigue is the disorder of our times. Stefanie Hechler-Fey is a manager herself and she has focused on this issue intensively: “Everyone is talking about burnout, in everyday working life, too – but when a manager is directly confronted with an employee’s burnout, a feeling of being unable to cope can sometimes take hold.” That’s why her lecture is designed as continued education and exchange for alumni who have personnel responsibility. What does it mean to have an employee with burnout in the team? “First off, it has to do with understanding: what exactly does burnout mean? What’s the difference compared to depression?” she explains. Secondly, it delves into the recognition and identification: “What are the initial symptoms? Which stages are there?” And thirdly, focus is on action: “from the prophylaxis, to supportive measures through to rehabilitation and beyond.”

Lecture for Managers
Tuesday 3/14/2017, 6 p.m.
MUNICH CAMPUS
Registration: www.together.tum.de/events

“What TUM primarily taught me was self-management and the joy of learning. That still influences me today.”

Stefanie Hechler-Fey

Since 2013, manager in the area of construction management and contract management, extra-occupational education as alternative practitioner of psychotherapy

Graduate degree in architecture 2002
Teheran – My City

With dedication, TUM alumni want to build up a regional TUM alumni network in Iran. One of the initiators is Nasim Tavakoli: “I love my home country and Tehran, and I’d really like to stroll through ‘my city’ with TUM alumni to usher in and celebrate the New Year, and show them the most beautiful corners: for one, the Milad Tower and then the Saadabad Palace.”

Tours in Tehran and get-together
Friday, 3/17/2017, 11 a.m.: Milad Tower
Thursday, 3/23/2017, 11 a.m.: Saadabad Palace
TEHERAN
Registration: www.together.tum.de/events

Nasim Tavakoli

Completed two Master’s degrees in Spain in the field of renewable energies and in nanoscience; is now starting her doctorate studies in Amsterdam

Exchange semester
Physics 2015

“At TUM, I had a kind of mentor in the form of a local student. He helped me with everything. Thanks to him, I made friends in Munich and gained insights into the Munich residents’ everyday life. That was simply awesome!”
“My best time at TUM was during my PhD studies. In a perfect team of chemists and engineers at the Faculty for Technical Chemistry, we could build up the test facilities ourselves freely according to our plans. At that time, there was the ritual of shared tea time. Today, we still meet on a regular basis: at our regulars’ table.”

Lecture and Guided Tour
Tuesday 3/21/2017, 2:30 p.m.
BURGKIRCHEN AN DER ALZ
Registration: www.together.tum.de/events

Gendorf Chemical Park

The Gendorf Chemical Park in Upper Bavarian Burgkirchen is a driving economic force of the region and the biggest chemical park in Bavaria. Around 4,000 employees work in the more than 30 companies there from the sectors of basic and specialty chemicals, plastics and energy supply. And it has an eventful history: it was founded in 1939 for military purposes, severely damaged by the Allies due to dismantling, from 1955, expanded into one of the major subsidiary plants of Hoechst AG. Following restructuring of the Hoechst Group, today’s chemical park was created starting in 1993. Alumnus Walter Foag looks forward to giving his guests an overview and showing them the chemical park: “We can visit one of the most state-of-the-art fire stations and a control room as well as the sewage treatment plant and a lot of production facilities.” And those who want to can also take a look into the lab and workshops of the park’s in-house training academy.

Dr. Walter Foag

Worked from 1982 until 1988 for Hoechst AG in the process engineering department and from 1988 until 2011 in the Gendorf plant in the occupational and plant safety department

Diplom Chemie 1977
Promotion 1981
From Turbofan to Open Robot: Flight Propulsion of the Future

Professor Franz Joos has been focusing on the development of aircraft engines for decades. Exclusively “from alumni for alumni,” he invites you to visit his lab in Hamburg in order to present the current research status and his research projects. “Diameters of aircraft engines are becoming increasingly larger today while delivering the same performance, which results in lower consumption and quieter drives. For example, the next generation is currently being launched – with an expected 15 percent reduction in consumption.” Another innovation is now in the concept design phase, too: the open rotor. “The new concept, open rotor, is powered by a conventional engine, but uses two big, counter-rotating and multi-panel blade wheels for thrust generation.” A tour of the lab after the lecture then gives the alumni the rare opportunity to once see close up test stands for turbo machines – turbines, compressor steam turbines, helicopter engines, and cascade tunnels.
Neuburg an der Donau:
From the Romans to the Present Day

When Manfred Veit talks about his hometown Neuburg, he goes into raptures: Such a diversified past! It can be traced back far beyond 2000 years, he explains: “A small castle and around it a camp village already existed here in Roman times.” He has now been pursuing his passion for the history of the region for 14 years as district homeland curator – and is widely known for his entertaining city tours. During an exclusive tour for alumni, he’ll show the impressive renaissance castle, the colorful castle chapel and the court church in the morning, and then stroll through the picturesque old town with you. For the lunch break, he recommends visiting an innkeeper who, says Veit, prepares an “exquisite boiled fillet of beef.” And in the afternoon, it’s time to visit the state gallery with its 160 paintings. What can be seen there? Flemish Baroque paintings. And specifically that means? “Rubens and his contemporaries.”

Historical City Tour and Much More
Saturday 4/22/2017, 10 a.m. – 4 p.m.
NEUBURG AN DER DONAU
Registration: www.together.tum.de/events

The small city of Neuburg (29,000 inhabitants) is one of Bavaria’s most beautiful Renaissance cities. It became the residential city of the newly founded principality of Palatinate-Neuburg at the beginning of the 16th century. The first count of the Palatinate region, Ottheinrich, had the medieval fortress remodeled into a Renaissance castle in 1527.
“My brain is a scientist and my heart is a musician. In music, you create new melodies, and new molecules in chemistry.”

Dr. Denise von Hohenesche

Worked for BASF until 2015, most recently at the Global Executive HR division, self-employed for a year now as music producer, composer and pianist

Graduate degree in chemistry 2002, PhD in 2005

Joint Attendance of Concert and Get-Together
Sunday 4/23/2017, 8 p.m.

HEIDELBERG
Registration: www.together.tum.de/events

This is where the music plays!
The “Heidelberger Frühling”

Heidelberg is charming and picturesque – and the city of the art song. With their collection “The Boy’s Magic Horn,” Achim von Arnim and Clemens Brentano created what was once the most important collection in the German language: by 1808, altogether 723 songs were published in three volumes. The two friends obtained editorial work in the small university city on the Neckar River. A tradition to which the music festival “Heidelberger Frühling” has felt committed ever since it was founded in 1997. It was therefore able to win over the globally celebrated baritone, Thomas Hampson, as mentor for maintaining the art song. For the alumni network of the Rhein-Main region, Denise von Hohenesche, who is active herself as composer and pianist under the name of Denise Duvoney and who lives in the Palatinate region, is happy to invite you to attend a concert together with a short introduction and stop afterwards – a great opportunity to have the finesses of classical music explained by an expert.

TIP:
On November 13, you can experience Denise von Hohenesche herself live at a piano matinee in the Steinway House in Munich. www.duvoneymusic.com
The TUM family benefits from the mutual support and networking of its members across and beyond disciplines, nationalities and generations. It interlinks experiences of life and expertise of its alumni, the creative spirit of graduates as well as the enthusiasm and thirst for knowledge of students in the global network.
Dedicated alumni have been accompanying young academics of TUM for years now with their know-how and competence, with empathy and confidence. They promote and challenge, open their individual networks and get involved with their personality. Give us some of your time and share your experiences, too, and sign up for a program of Alumni for Students.
TUM Mentoring by Alumni for Students

Over the past few years, more than 1,000 alumni have been available as mentors. The interest of students and doctoral candidates in a mentorship is continually high. Entry into the program is possible at all times. The mentorship generally lasts one year. It’s very individual and is aligned to the mentees’ needs and the mentors’ possibilities. If you’re interested and want to support students, just sign up here:

mentoring@tum.de

German Matters

The program German Matters is offered, especially for international Master’s degree students from the fields of information technology and physics. First, the students intensively learn German in courses provided by the TUM’s language center. Afterwards, they can put their language skills into actual practice with alumni in a mentorship and get to know more about life in Germany. We’re looking for 25 alumni in the Munich region who enjoy accompanying young Master’s degree students from all over the world up to one year as a mentor and who will give them insights into the German culture and working life.

Come to the kick-off event for this specific language and culture mentorship!

Monday, 11/14/2016, 7 p.m.
Kick-off Event

You'd like to give students or doctoral candidates insights into your field of work?

Sign up quickly in a form-free way at alumniundcareer@tum.de

"I focus on Industry 4.0 and digitalization and think my job is very exciting. I'd really like to enthuse students for this."
Maximilian Kürig

"Mr. Kürig took a lot of time to give me deeper insights into the company, several employees introduced me to their projects and I was able to participate in internal meetings and external telephone conferences."
Carina März

Job Shadowing of Alumni for Students

During job shadowing, alumni give insider insights into their personal working life and occupational world: students or doctoral candidates accompany them a whole working day and alumni give information and answers to questions. TUM student Carina März (Master’s degree in economics with technology) was one of the first ones who could try out the new job shadowing and she was enthused. Host was Maximilian Kürig (graduate degree in mechanical engineering & management 2014), who works for ifp consulting as Head of Business Development for the business unit ifp analytics.
Career Lounge

Do you have experience in selecting personnel? Did you directly enter the industry right after earning your PhD? Or do you work in the patent system or have insights into the consulting industry? Which tips do you want to pass on to young career starters? Give your know-how and share your experiences with young people in our Career Lounge and help academic up-and-coming talents with vocational orientation. The Career Lounge is a format that lets TUM alumni gain insights into your career path and your everyday professional life in a relaxed atmosphere and enables young people to benefit from your knowledge.

Registration: alumniundcareer@tum.de
Collegial Consulting

You already have job experience and want to accompany young people during their first professional steps in a supportive way? Many graduates would like support when starting their career. They’re faced with initial challenges in a team or complex interpersonal constellations. Learn the methods of collegial consulting in a practice project, and then get active as moderator with a group of students or young alumni. Collegial consulting is a form of consulting in groups, where participants mutually consult with regard to problems at work. As a building block of HR development, it is often used in manager training, too. It’s a method to reflect experiences and to master challenging situations in a better way.

Registration: alumniundcareer@tum.de

Collegial Consulting: Alumni wanted as Moderators

The pilot project starts in January 2017 with a practice project, during which you’ll learn the methods of collegial consulting.
Experience the TUM feeling: TUM is a lively university throughout the whole year that maintains its traditions and invites you to take part. Benefit from the advantages to learn interesting things from research and science or get involved in choirs and orchestras, sports or in the group of friends. Welcome to the TUM family circle!
There are hundreds of events at TUM: from research conferences, speeches, lectures, exhibitions through to language courses, library tours, career forums, festivals like the Dies Academicus or TUNIX-Festival up to Advent concerts and annual church services. You can always find an actual overview of many more dates at: www.mytum.de/termine

</tbody>
</table>
The TU Movie theater was founded in around 1955, and was still called TH-Film at that time. The oldest program that has been maintained is from the year 1966. In those days, the movies were already shown in lecture hall 1,200 (physics lecture hall, today the Carl von Linde lecture hall), and admission cost was 50 pfennigs.

Today as well, students organize the TU Movie (now in an association) and show more than 20 movies each semester. In 2012, a professional digital movie projector was purchased so that digital films can be shown, too.

**MUNICH CAMPUS**

Carl von Linde Lecture hall 1.200  
Enterance around 7:30 p.m.  
Showtime at about 8 p.m.  
Price for ticket: 3 €
Organizer: tu film e. V.
**Actual program:** www.tu-film.de/programm

**Call!**

Unfortunately, very little is known about the beginnings of the TU Movie theater. Did you participate in the TU Movie during your studies? Do you still have old programs, photos, souvenirs / remembrances?

*If so, please contact us: alumniundcareer@tum.de*
### Orchestra

<table>
